<b>Preface</b>	<b>ix</b>
<b>Listings</b>	<b>xiii</b>
<b>Notation and Acronyms</b>	<b>xv</b>
<b>1 Introduction and preliminaries</b>	<b>1</b>
1.1 Matrix equations . . . . .	2
1.2 Algebraic Riccati equations . . . . .	3
1.2.1 Nonsymmetric equations . . . . .	3
1.2.2 Equations associated with M-matrices . . . . .	3
1.2.3 Continuous-time equations . . . . .	5
1.2.4 Discrete-time equations . . . . .	6
1.3 Unilateral quadratic matrix equations . . . . .	8
1.4 Useful concepts and definitions . . . . .	9
1.4.1 Invariant and deflating subspaces . . . . .	9
1.4.2 Some definitions from control theory . . . . .	11
1.4.3 Matrix polynomials . . . . .	12
1.4.4 Eigenvalue transformations . . . . .	14
1.4.5 Splitting properties . . . . .	20
1.5 Hamiltonian and symplectic matrices . . . . .	22
1.6 Algorithmic issues . . . . .	26
1.6.1 Convergence speed . . . . .	26
1.6.2 Cost of elementary matrix operations . . . . .	28
1.6.3 Conditioning and numerical stability . . . . .	29
1.7 Available software . . . . .	30
1.8 Additional notes and further reading . . . . .	31
<b>2 Theoretical analysis</b>	<b>33</b>
2.1 Invariant subspaces and algebraic Riccati equations . . . . .	33
2.1.1 Nonsymmetric equations . . . . .	33
2.1.2 Equations associated with M-matrices . . . . .	37
2.1.3 Continuous-time equations . . . . .	39
2.1.4 Discrete-time equations . . . . .	40

2.2	Extremal solutions . . . . .	41
2.2.1	Equations associated with M-matrices . . . . .	42
2.2.2	Continuous-time equations . . . . .	46
2.2.3	Discrete-time equations . . . . .	49
2.3	Critical solutions . . . . .	50
2.4	Shift techniques . . . . .	52
2.4.1	Equations associated with M-matrices . . . . .	54
2.4.2	Continuous-time equations . . . . .	57
2.5	Transformations between discrete- and continuous-time . . . . .	61
2.6	Unilateral quadratic matrix equations . . . . .	62
2.7	Transforming an algebraic Riccati equation to a UQME . . . . .	67
2.7.1	Simple transformation . . . . .	68
2.7.2	UL-based transformation . . . . .	70
2.7.3	Reduction to a UQME of lower size . . . . .	73
2.8	Perturbation results . . . . .	75
2.8.1	Algebraic Riccati equations . . . . .	76
2.8.2	UQMEs . . . . .	80
2.9	Additional notes and further reading . . . . .	81
<b>3</b>	<b>Classical algorithms</b>	<b>83</b>
3.1	Linear matrix equations . . . . .	83
3.1.1	Sylvester, Lyapunov, and Stein equations . . . . .	83
3.1.2	Generalized equations . . . . .	87
3.2	Invariant subspaces methods . . . . .	87
3.2.1	Balancing technique . . . . .	92
3.3	Newton's method . . . . .	92
3.3.1	Continuous-time equations . . . . .	93
3.3.2	Equations associated with M-matrices . . . . .	98
3.3.3	Other algebraic Riccati equations . . . . .	101
3.3.4	Iterative refinement and defect correction . . . . .	102
3.4	Functional iterations . . . . .	103
3.5	Matrix sign function method . . . . .	105
3.5.1	Continuous-time equations . . . . .	105
3.5.2	Computing the matrix sign function . . . . .	107
3.5.3	Other algebraic Riccati equations . . . . .	109
3.6	Numerical experiments . . . . .	111
3.6.1	Continuous-time equations . . . . .	111
3.6.2	Equations associated with M-matrices . . . . .	114
3.7	Additional notes and further reading . . . . .	118
<b>4</b>	<b>Structured invariant subspace methods</b>	<b>121</b>
4.1	Elementary matrices . . . . .	122
4.2	Hamiltonian condensed and special forms . . . . .	125
4.2.1	The PVL form . . . . .	126
4.2.2	URV Decomposition . . . . .	128
4.2.3	Other condensed forms . . . . .	131

4.3	Hamiltonian QR algorithm . . . . .	131
4.3.1	The Hamiltonian/symplectic QR step . . . . .	133
4.4	Computation of the eigenvalues of a Hamiltonian matrix . . . . .	135
4.5	The URV algorithms . . . . .	136
4.6	The multishift algorithm . . . . .	140
4.7	Additional notes and further reading . . . . .	142
<b>5</b>	<b>Doubling algorithms</b>	<b>145</b>
5.1	Structured doubling algorithm . . . . .	146
5.1.1	SDA-I . . . . .	147
5.1.2	SDA-II . . . . .	151
5.1.3	QR-based doubling algorithm . . . . .	153
5.2	Cyclic reduction . . . . .	155
5.2.1	Convergence properties . . . . .	158
5.2.2	Applicability . . . . .	161
5.2.3	Interplay with SDAs . . . . .	167
5.3	Solving algebraic Riccati equations . . . . .	168
5.3.1	Equations associated with M-matrices . . . . .	168
5.3.2	Continuous-time equations . . . . .	179
5.3.3	Discrete-time equations . . . . .	184
5.4	Acceleration techniques . . . . .	188
5.5	Numerical experiments . . . . .	190
5.5.1	Continuous-time equations . . . . .	190
5.5.2	Equations associated with M-matrices . . . . .	191
5.6	Additional notes and further reading . . . . .	192
<b>6</b>	<b>Algorithms for large-scale problems</b>	<b>195</b>
6.1	Linear matrix equations with large and sparse coefficients . . . . .	196
6.1.1	The ADI iteration . . . . .	196
6.1.2	Cholesky factor ADI . . . . .	198
6.1.3	Krylov subspace methods . . . . .	201
6.2	Continuous- and discrete-time Riccati equations . . . . .	204
6.3	Additional notes and further reading . . . . .	206
<b>A</b>	<b>Basic properties</b>	<b>209</b>
A.1	Norms and spectral radius . . . . .	209
A.2	Matrix factorizations and decompositions . . . . .	211
A.3	Krylov subspaces . . . . .	213
A.4	Properties of Kronecker product . . . . .	214
A.5	Nonnegative matrices and M-matrices . . . . .	215
A.6	Matrix functions and Laurent power series . . . . .	216

---

A.7	Fréchet derivative and its properties . . . . .	217
A.8	Elementary matrices . . . . .	218
<b>Bibliography</b>		<b>221</b>
<b>Index</b>		<b>245</b>
